DETAILED ACTION

1. The Amendment filed by Applicant on 01/26/06 has been entered.

Response to Amendment/Arguments

2. Applicant's amendment and arguments filed on 01/26/06 have been fully considered and they are found unpersuasive.

3. The rejection of claims under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement is withdrawn.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1713

5. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

6. Claims 1-12 and 16-17 remain rejected under 35 U.S.C. 103(a) as being unpatentable over Hoveyda et al., WO 02/14376 (hereinafter "Hoveyda") in view of Muhlebach et al., U.S. Patent No. 5,854,299 (hereinafter "Muhlebach"). Hoveyda teaches Ru complex of a 1,3-dimesityl-4,5-dihydroimidazol-2-ylidene and styrenyl ether ligand. See Hoveyda, Abstract; pages 2-4. Hoveyda further teaches that the Ru complexes are functional in ROMP polymerization reactions. See Hoveyda, page 7. The present invention differs from Hoveyda in that Hoveyda does not expressly teach polymeric compounds containing the Ru complex. Muhlebach teaches, in analogous art, polymeric compounds containing products of cyclic olefins and ROMP complexes. See Abstract; cols. 8-11. In view of Muhlebach, one having an ordinary skill in the art would be motivated to modify Hoveyda

Art Unit: 1713

by introducing cyclic olefins in the presence of the Ru complexes. Such modification would be obvious because one would expect that the use of Ru complexes as taught by Hoveyda would be similarly useful and applicable to the ROMP process in Muhlebach.

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

8. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
